Sharon, MA

About me:

I am a creatively driven individual who is highly motivated in solving design problems through my skills in technology, design, and psychology with one year of experience.

My design process follows a flexible but thorough manner where I begin with research, such as competitive analysis and user interviews/surveying. User personas and journey maps are created from the information gathered, which helps create low-fidelity wireframes. After polishing the designs and going through testing phases, wireframes turn into high-fidelity prototypes through many iterations, where they can be presented and handed off.

Experience:

Optometry Office

Assistant July 2019 - August 2019

- Greeted 10-15 visitors at service desk each day, scheduled appointments, and verified insurance coverage for services
- Organized and prepared office files
- Checked patients' insurance and managed payments

Asian Community Development Corporation

Volunteer June 2017 - August 2019

- Organized office files and analyzed data
- Analyzed exam grades and survey answers using Excel
- Assisted visitors and customers at front desk

UMass Amherst

Teaching Assistant September 2018 - December 2018

- Psychology Teaching Assistant
- Graded many assignments from students, and proctored exams
- Held office hours to assist students with material
